230 v / 16 Amp operation	O	O	O	-	-
Detachable basket ¹⁾	O	O	O	O	O

+ Standard feature

O Option

¹⁾ Transit length less approx. 1.00 m

The OMME lift type EIBZ is an electro hydraulic battery operated lift.

Standard features are hydraulic stabilizers, proportional controls, turnable basket and an extendable towing bar with a 40 mm eye towing hitch.

Turning the basket manually the travelling width will be reduced to 1.1m (travelling length: +0.22 m). The lift can then pass through narrow areas.

The basket is attached to the last boom section in such a way as to provide an increase in outreach, up and over obstructions.

To minimize the travelling length the platform can optionally be equipped with a detachable basket.

All lifts can be supplied with hydraulic propulsion operated from a platform giving the operator excellent overall view and full control of travel operation.

Higher cycle times can be achieved by increasing battery capacity (travelling length: +0.35 m).

The OMME lift type EIBZ is perfect for internal work giving easy manoeuvrability in tight working areas.

Specifications subject to change without notice.
