

Course introduction

This is a comprehensive one day training course (approximately 8am to 3.30pm) which will provide anyone in your organisation who manages, organises, supervises or plans the use of Mobile Elevating Work Platforms (MEWPS) with the information they require to work and act in a safe and professional manner. Managers can be confident that they're making a positive impact on their workplace ethic and practice. This course will provide them with the knowledge they require to deal with the constantly changing demands related to working at height. Developed and endorsed by IPAF (International Powered Access Federation), it incorporates a combination of both theory and practical with both areas being delivered by our Senior IPAF Instructor. During the course there is also the opportunity for further hands on experience with the machinery. IPAF operators will be available to assist you with the equipment and to answer any general questions which you may have.
