

haulotte compact 12 dx scissor lift

The Compact 12DX has few equals when it comes to rough terrain work. It's almost unique in its provision of an extremely tight turning circle, and is approximately half a metre smaller in width than many of its competitors. The machine can cope with gradients of up to 40% and still provide a working height of up to 12.2 metres. The big deck 2.50m x 1.50m platform provides a large and safe working area with a generous carrying capacity of 450kg. The differential controls allowing much easier operator handling. A solid option for anyone working where tough site conditions exist.

haulotte ha260px self propelled boom

This articulating boom is the solution for many complicated applications. It provides a working height of 25.6 metres whilst still giving operators an amazing 16.20m of outreach. One of the machines most useful features is its working area. This is seen through a positive/negative articulating fly jib with 140° movement and simultaneous boom functions, greatly improving the machines productivity levels. Its 42cm ground clearance and hydraulic differential lock system provide it with excellent 4x4 handling. The HA260px has a generous cage capacity of 230kg, and a powerful deutz diesel engine making it a strong contender for those hard to reach jobs.

wumag 30m vehicle mounted machine

This is a powerfully built four wheel drive machine with a huge outreach of up to 15.8m. Combining proven Mercedes Unimog technology with a lightweight Omme access platform, the Wumag 30m is as at home on the city streets as it is on rough terrain. A four section telescopic boom allows greater flexibility with working heights and excellent stability provided through four independently controlled H type outriggers. The Wumag also offers variable jacking widths, a rotating cage, 230kg cage capacity and 110v cage power outlet.

ommemog 30m truck mounted platform

The Ommemog is true off road machine with some outstanding capabilities. Renowned for its quality, the Ommemog is a go anywhere machine being at home on virtually any type of terrain. It has a working height of 30.5m and an excellent outreach of 12.75m. Its generous 200kg cage capacity coupled with a handy 110v cage power outlet and the amazing ability to operate in up to 2.5m of water gives this machine numerous advantages over standard rough terrain platforms. Weighing in at only 12000kg makes it suitable for working on sandy beaches or where ground weight is seen to be an issue.
