

RUTHMANN HIGHquality

We offer safety.

Communes, power suppliers and people in the rental business appreciate the versatility of the T 170 using it with pleasure to fulfil tasks such as the servicing of lighting, pruning of trees and erection works.

Equipped with a working cage of 1,30 x 1,00 m made of polyester, the STEIGER® T 170 is especially suitable for works at transmission lines. Remarkable features of the compact and robust truck-mounted aerial platform are its low overall height of 3,30 – 3,40 m as well as its enormous manoeuvrability and the wide lateral outreach to either side of 11,55 m.

The lateral entrance to the working cage is easy and comfortable. Loading and unloading of the working cage is rapidly done. A speedy and smooth ascent to the top is sure. The carrying capacity of the cage is, depending on which series, 200 kg or 265 kg.

Stability of the STEIGER® is guaranteed by means of the slope-type jacks with a small jacked width. When rotating, the turret does not swing out, which increases the safety.

A quick but at the same time gentle procedure of movements is attained due to the sensitive proportional controlling system.

The STEIGER® can be mounted on light and heavy-duty carrier-chassis. The minimal overall length and its manoeuvrability are characteristics which make the STEIGER® T 170 a classical in our program.

**Ruthmann technique is perfection:
HIGHquality – Safety and Stability.**

RUTHMANNSTEIGER® T 170

Working height:	16,10 - 16,60 m
Platform height:	14,60 m
Lateral outreach max.:	11,55 m
Range of rotation:	450°
Swivelling angle of Rüssel®:	200°
Size of working cage:	1,30 x 1,00 m
Carrying capacity:	200/265 kg
Telescopic extension:	3,43 m
Siting inaccuracy:	5°
Overall height:	3,30 - 3,40 m
